National Cooperative Dairy Herd Improvement Program

A plan for every size herd

STANDARD DHIA

OWNER SAMPLER

WEIGH-A-DAY-A-MONTH

AGRICULTURAL RESEARCH SERVICE, U. S. DEPARTMENT OF AGRICULTURE

February 1957

ARS-52-47
(Vol. 33, No. 2)

DAIRY PRODUCTION RECORDKEEPING INCREASING

For the first time an annual report is compiled on the total number of herds and cows included in the National Cooperative Dairy Herd Improvement Program, consisting of the Standard DHIA, the Owner-Sampler and the Weigh-a-Day-a-Month Recordkeeping Plans.

More cows are on test in the Standard DHIA Recordkeeping Plan than ever before. On January 1, 1957, there were 1,479,799 cows on test. This is 73,493, or 5.2 percent, more cows than were on test January 1, 1956.

More cows were on test in the Owner-Sampler Recordkeeping Plan than ever before. On January 1, 1957, there were 405,090 cows on test. This is 30,611, or 8.2 percent, more cows than were on test January 1, 1956.

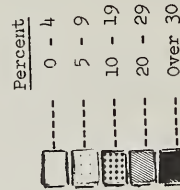

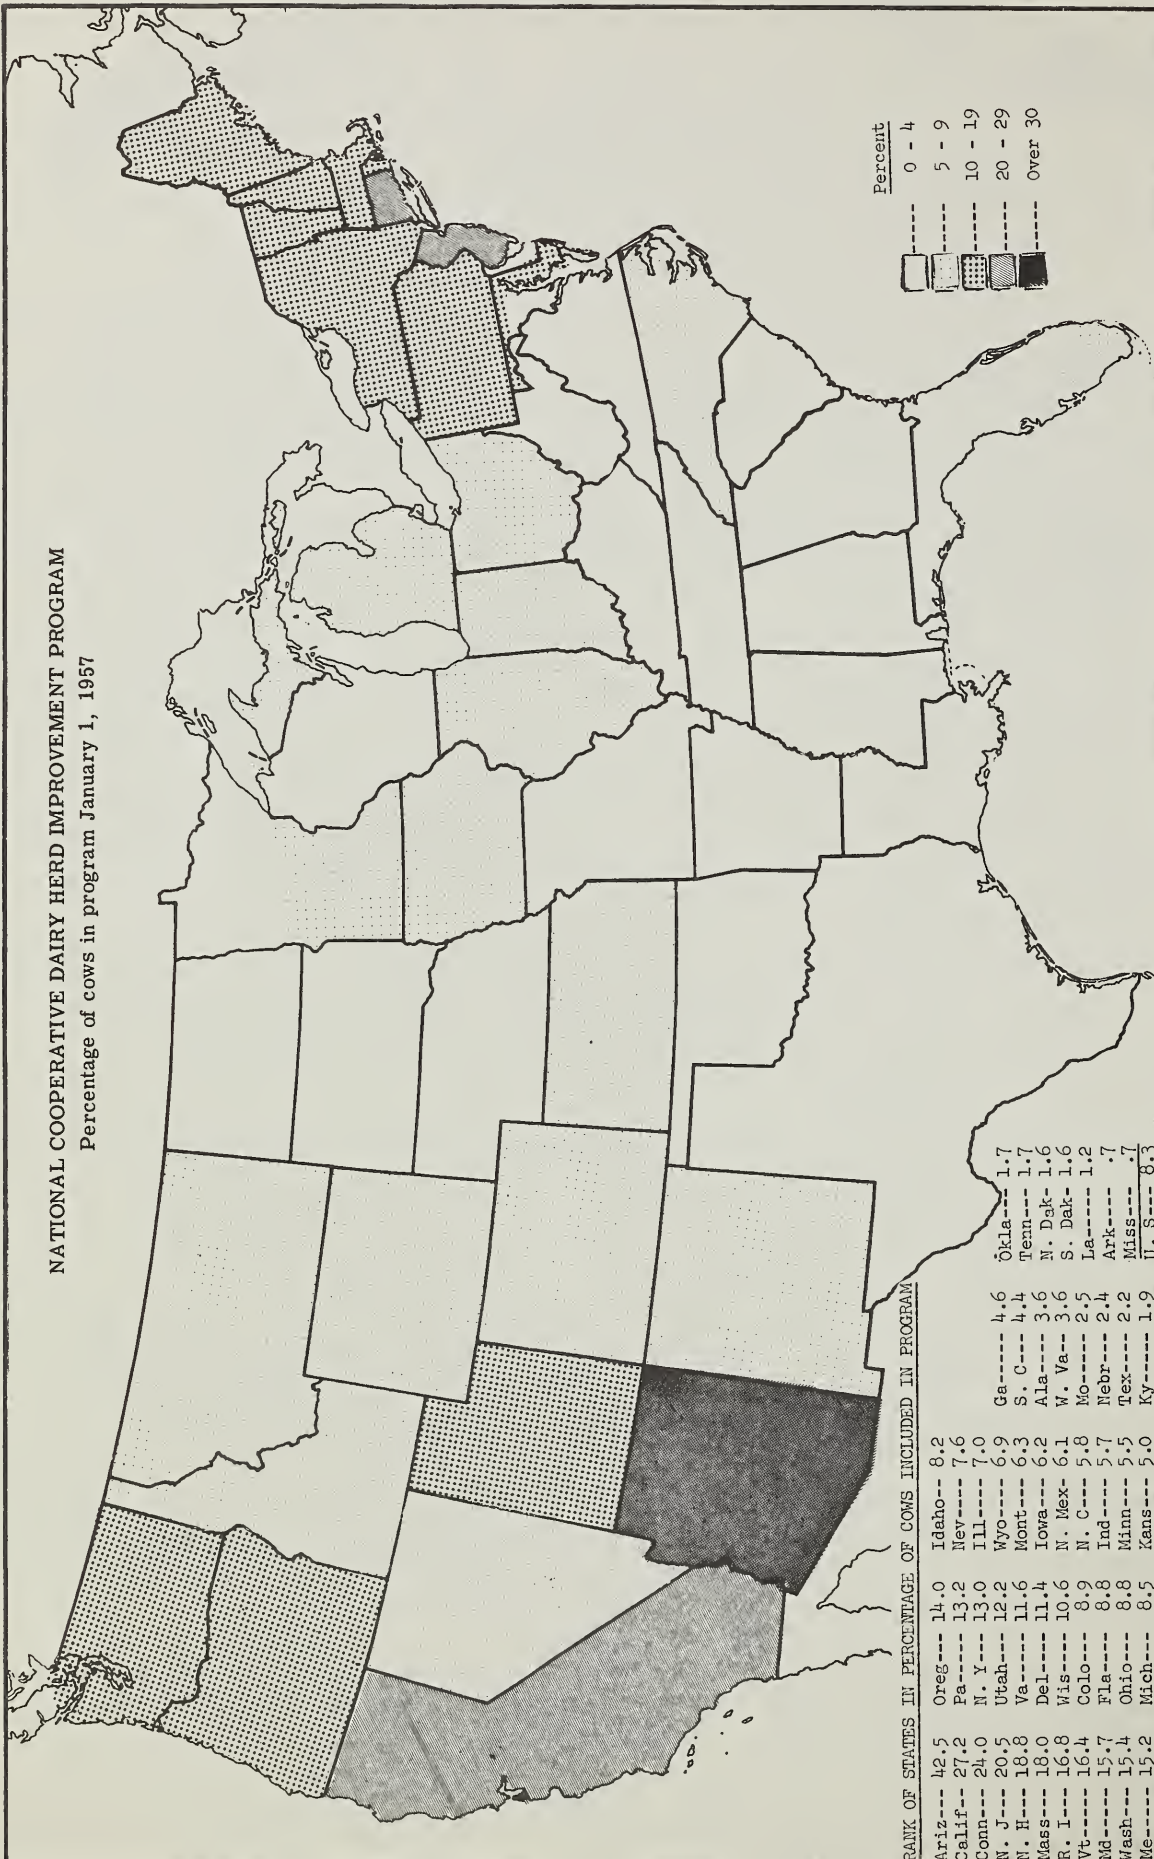

For the first time a report is made on the number of cows included in the Weigh-a-Day-a-Month Dairy Recordkeeping Plan. This Plan was first introduced on a national scale last September and is still to be introduced in many counties of the country. The WADAM report is, therefore, a progress report only.

Included in the National Cooperative Dairy Herd Improvement Program (DHIA, OS, and WADAM) are 63,590 herds and 1,906,186 cows. This number of cows represents 8.3 percent of the cows of the nation.

Wisconsin leads the States in the number of cows and Arizona leads the States in the percentage of cows included in the National Cooperative Dairy Herd Improvement Program.

Data on the status of the National Cooperative Dairy Herd Improvement Program by States, as reported by State Extension Dairymen, are given on the following pages.

DHIA PROVED-SIRE RECORDS TABULATED IN JANUARY 1957

Following is a list of 253 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in January 1957. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference, to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
